200
municipalities trust us

The Intelligent Road Management System

With vialytics, you spend less time gathering data and more time taking action. With our software, you can automatically assess the condition of your road infrastructure, plan effective measures based on current data, and manage all maintenance tasks in a single place.
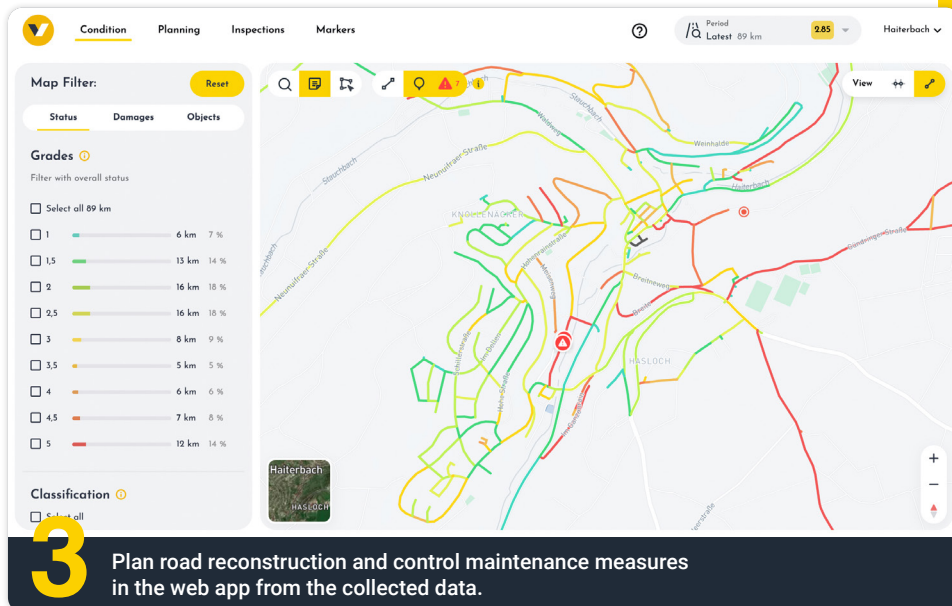

1 Assess your roads by car, bicycle or on foot whenever you like.

2 Our system automatically detects and evaluates 15 damage classes.

3 Plan road reconstruction and control maintenance measures in the web app from the collected data.

How does vialytics support you?

Saving money
Assess road condition before each winter to preventively fill cracks and joints.

Saving time
With up-to-date images, you speed up track control and save on-site appointments.

Getting backed up
Our objective data will support you in the next municipal council meeting.

Keeping the overview
Keep track of all maintenance activities in your building yard.

Archieving legal security
Your route control is automatically documented via GPS in a legally compliant manner.

Strengthening collaboration
Your colleagues from the public order and green space office also benefit from up-to-date images.
